Chapter 1

Another H1 title, with images

images can be specified like so, notice the width and height.

Figure 1.1: "An exemplary image"

1 Citation example

Citation text (Cousteau Jacques & Dugan James 1963)

Chapter 2

An h1 header

Paragraphs are separated by a blank line.

Click here to see code. Or, if you're targeting pdf with Latex, you can specify the page: page 3.

2nd paragraph. Italic, bold, and monospace. Itemized lists look like:

- this one
- that one
- the other one

Note that — not considering the asterisk — the actual text content starts at 4-columns in.

Block quotes are written like so.

They can span multiple paragraphs, if you like.

Use 3 dashes for an em-dash. Use 2 dashes for ranges (ex., "it's all in chapters 12–14"). Three dots ... will be converted to an ellipsis. Unicode is supported.

1 An h2 header

Here's a numbered list:

- 1. first item
- 2. second item

3. third item

Note again how the actual text starts at 4 columns in (4 characters from the left side). Here's a code sample:

```
1 # Let me re-iterate ...
2 for i in 1 .. 10 { do-something(i) }
```

As you probably guessed, indented 4 spaces. By the way, instead of indenting the block, you can use delimited blocks, if you like:

```
1 define foobar() {
2    print "Welcome to flavor country!";
3 }
```

(which makes copying & pasting easier). You can optionally mark the delimited block for Pandoc to syntax highlight it:

Listing 2.1: test

```
1 import time
2 # Quick, count to ten!
3 for i in range(10):
4  # (but not *too* quick)
5  time.sleep(0.5)
6  print i
```

1.1 An h3 header

Now a nested list:

- 1. First, get these ingredients:
 - carrots
 - celery
 - lentils
- 2. Boil some water.
- 3. Dump everything in the pot and follow this algorithm:

- find wooden spoon¹
- uncover pot
- stir
- cover pot
- balance wooden spoon precariously on pot handle
- wait 10 minutes
- goto first step (or shut off burner when done)

Do not bump wooden spoon or it will fall.

4. Now let's write a paragraph inside the list item

This is the paragraph text. Whew

Notice again how text always lines up on 4-space indents (including that last line which continues item 3 above).

Here's a link to a website, to a local doc, and to a section heading in the current doc. Here's a footnote.²

Tables can look like this:

Table 2.1: Shoes, their sizes, and what they're made of

size	material	color
9	leather	brown
10	hemp canvas	natural
11	glass	transparent

(The above is the caption for the table.) Pandoc also supports multi-line tables:

¹Another footnote!

²Footnote text goes here.

keyword	text
red	Sunsets, apples, and other
	red or reddish things.
green	Leaves, grass, frogs and
	other things it's not easy
	being.

A horizontal rule follows.

Here's a definition list:

apples Good for making applesauce.

oranges Citrus!

tomatoes There's no "e" in tomatoe.

Again, text is indented 4 spaces. (Put a blank line between each term/definition pair to spread things out more.)

Here's a "line block":

Line one

Line too

Line tree

In line math equations go in like so: $\omega = d\phi/dt$. Display math should get its own line and be put in in double-dollar signs:

$$I = \int \rho R^2 dV$$

And note that you can backslash-escape any punctuation characters which you wish to be displayed literally, ex.: 'foo', *bar*, etc.
